

Denn Clifford

Sunreef 67

The first 67' Sunreef Power Catamaran will be launched at the Sunreef Yachts Shipyard in Gdansk, Poland, in September 2007. The first hull is for a family voyage around the world; and therefore will have a range of 3000 nautical miles while cruising at eight knots with twin 870 hp Volvo Penta engines, which provide a top speed of 30 knots. The exterior was styled by the luxury yacht designer Denn Clifford, in collaboration with Sunreef engineers and designers. Manufactured by using the resin-infusion method, the 67 Sunreef Power Catamaran will be available in three versions: charter, semi-owner, and owner. The flybridge features the main helm station, sun-

bathing mattresses and a dining table surrounded by comfortable seating. The saloon and lounge area has an elegant bar with a staircase leading to the galley and guest cabins within the hulls, and also to the second helm station located on the mezzanine deck. From here passengers can access the owners' cabin or two guest cabins. These cabins are situated in the forward section of the catamaran and thus offer wonderful sea views. A lot of thought and space planning went into designing the flybridge, where, by special request of the first client, all furniture is easy to dismantle in order to create a playing area for children on this huge upper deck.
